1. Here you can check out an interactive way to tweak graphical parameters and also generate the code that produces the exact plot https://github.com/calligross/ggthemeassist

   - Thanks Alessandro Orio

2. ggplot2 now offers users to add secondary y-axis to plots. You can read more about it here http://ggplot2.tidyverse.org/reference/sec_axis.htm

   - Thanks Nataliia Kulatska

3. In the final version of the baseR plot, the axes did not align in the origin (a default setting when you remove the outer boxes). The script has been updated with a new plot that also connects the axes using the arguments: `xaxs="i"`, `yaxs="i"`

   - Thanks Anna Gårdmark for the suggestion
